

Instalasi Ajenti Debian 9

Pastikan akun sudah memiliki akses root. Gunakan perintah berikut untuk pindah menjadi root

```
su
```

Masukkan password root masing-masing

Sebelum mulai, update dan upgrade system package Debiannya

```
apt update
apt upgrade
```

Install repository signing key nya

```
wget http://repo.ajenti.org/debian/key -O- | sudo apt-key add -
```

Tambahkan repository nya

```
echo "deb http://repo.ajenti.org/debian main main debian" | sudo
tee -a /etc/apt/sources.list
```

Lakukan system update kemudian install Ajentinya

```
apt update
apt install ajenti
```

Jika berhasil, kalian akan mendapat tampilan seperti berikut

```
...
:: Generating certificate
Signature ok
subject=C = US, ST = NA, L = Nowhere, O = Acme Inc, OU = IT, CN =
debian
Getting Private key
:: SSL configured!
-----
Now start Ajenti with 'service ajenti restart'
Ajenti will listen on HTTPS port 8000 by default
Default username : root
Default password : admin
-----
Processing triggers for libc-bin (2.24-11+deb9u4) ...
Processing triggers for python-support (1.0.15) ...
Processing triggers for systemd (232-25+deb9u9) ...
```

Akses Ajenti melalui browser dengan mengetikkan alamat ip SO Debian Virtual

```
http://<server-IP>:8000
```

Contoh:

```
http://192.168.90.153:8000
```

Gunakan perintah berikut untuk mengetahui IP Address Debian Virtual

```
ip addr
```
